EnCompass Workshop: Emerging Technologies and Transmission Impacts in Resource/System Planning

Optional workshop, \$495 fee, registration required, lunch provided
1898 & Co. (Burns & McDonnell), Iola Auditorium
9400 Ward Parkway, Kansas City, MO 64114

Join us for this review of several types of emerging technologies and their impact on the grid, including batteries, electric vehicles, and demand response programs.

This workshop will focus on modeling these different technologies, evaluating system impact, and validating results. We'll walk through examples of capacity expansion studies. Then, we'll evaluate the results within a nodal transmission framework to forecast congestion and profitability using different points of interconnections.
